Mounting and wiring instruction manual

Communication Expansion Module **QMC1-C** No. QMC11E5 2023.03

Preface

Thank you for purchasing our communication expansion module [QMC1-C]] (hereinafter referred to as this instrument or communication expansion module).

This instruction manual (hereinafter referred to as this manual) describes the specifications mounting method, functions, operation method, and handling of this instrument. Please read this manual carefully and fully understand it before using it.

- Please read this interview of this instruction manual (detailed version) of QMC1-C_. Please access our website from the following URL or QR code to download the Please access our website from the following URL or QR code to download the traction manual (detailed version).

Notes

- This instrument should be used in accordance with the specifications described in the manual.
- If it is not used according to the specifications, it may malfunction or cause a fire. Be sure to follow the warnings, cautions and notices. If they are not observed, serious injury or malfunction may occur
- The contents of this instruction manual are subject to change without notice.
- · Care has been taken to ensure that the contents of this instruction manual are correct, but if there are any
- doubts, mistakes or questions, please inform our sales department. This instrument is designed to be installed on a DIN rail within a control panel indoors. If it is not, measures must be taken to ensure that the operator does not touch power terminals or other high voltage sections.
- Any unauthorized transfer or copying of this document, in part or in whole, is prohibited · Shinko Technos Co., Ltd. is not liable for any damage or secondary damage(s) incurred as a result of using
- this product, including any indirect damage

SAFETY PRECAUTIONS

Be sure to read these precautions before using our products.

The safety precautions are classified into categories: "Warning" and "Caution". Depending on circumstances, procedures indicated by <u>A</u> Caution may result in serious consequences, so

be sure to follow the directions for usage.

Warning Caution

Procedures which may lead to dangerous conditions and cause death or serious injury, if not carried out properly. Procedures which may lead to dangerous conditions and cause superficial to medium injury or physical damage or may degrade or damage the product, if not carried out properly.

∕!∖ Warning

To prevent an electrical shock or fire, only Shinko or qualified service personnel may handle the inner assembly.

To prevent an electrical shock, fire, or damage to instrument, parts replacement may only be undertaken by Shinko or qualified service personnel

∕!∖ Safety Precautions

To ensure safe and correct use, thoroughly read and understand this manual before using this instrument.

- This instrument is intended to be used for industrial machinery, machine tools and measuring equipment. Verify correct usage after purpose-of-use consultation with our agency or main office (Never use this instrument for medical purposes with which human lives are involved.)
- External protection devices such as protective equipment against excessive temperature rise, etc. must be installed, as malfunction of this product could result in serious damage to the system o injury to personnel. Proper periodic maintenance is also required.
- This instrument must be used under the conditions and environment described in this manual Shinko Technos Co., Ltd. does not accept liability for any injury, loss of life or damage occurring du
- to the instrument being used under conditions not othe e stated in this manual

Meaning of Warning Message on Model Label

Caution

If do not handle this instrument correctly, may suffer minor or moderate injury or property damage due to fire, malfunction, or electric shock. Please read this manual carefully and fully understand i before using it.

Caution with Respect to Export Trade Control Ordinance

To avoid this instrument from being used as a component in, or as being utilized in the manufacture of weapons of mass destruction (i.e. military applications, military equipment, etc.), please investigate the end users and the final use of this instrument. In the case of resale, ensure that this instrument is not illegally exported

Precautions for Use

Installation Precautions

∕!∖ Caution

This instrument is intended to be used under the following environmental conditions (EN61010-1): Pollution degree 2

- Ensure the mounting location corresponds to the following conditions: A minimum of dust, and an absence of corrosive gases
- No flammable, explosive gases
- No mechanical vibrations or shocks
- No exposure to direct sunlight, an ambient temperature of -10 to 50°C (14°F to 122°F) that does not change rapidly, and no icing
- An ambient non-condensing humidity of 35 to 85 %RH No large capacity electromagnetic switches or cables through which large current is flowing
- No water, oil or chemicals or the vapors of these substances can come into direct contact with the
- When installing this unit within a control panel, please note that ambient temperature of this unit not the ambient temperature of the control panel - must not exceed 50°C (122°F). Otherwise the life of electronic components (especially electrolytic capacitor) may be shortened.

Avoid setting this instrument directly on or near flammable material even though the case of this instrument is made of flame-resistant resin

Wiring Precautions

Caution /!\

- Do not connect two or more control module QTC1-2P (with power supply / communication option) (hereinafter referred to as QTC1-2P) or QTC1-4P (with power supply / communication option) (hereinafter referred to as QTC1-40) in one unit.
- When wiring, do not drop wire scraps into the ventilation window of this instrument It may cause fire or malfunction.
- When wiring, use a crimping pliers and a solderless terminal with an insulation sleeve in which an M3 screw fits. Tighten the terminal screw using the specified torque
- f excessive force is applied to the screw when tightening, the screw or case may be damaged Do not pull or bend the lead wire with the terminal as the base point during or after wiring work. t may cause malfunction
- This instrument does not have a built-in power switch, circuit breaker and fuse.
- It is necessary to install an appropriate power switch, circuit breaker and fuse near the instrument. When wiring the power supply (24 VDC), do not confuse the polarities.
- Use copper wires AWG16 to 14 (1.31 to 2.08 mm²) for the FG terminal and Power supply

Operation and Maintenance Precautions

Caution

- Do not touch live terminals. This may cause electrical shock or problems in operation. Turn the power supply to the instrument OFF when retightening the terminal or cleaning. Working on or touching the terminal with the power switched ON may result in severe injury or
- death due to electrical shock
- Use a soft, dry cloth when cleaning the instrument. (Alcohol based substances may tarnish or deface the unit.)
- As the display section is vulnerable, be careful not to put pressure on, scratch or strike it with a hard obiect

Compliance with Safety Standards

/!\ Caution

- If the instrument is used in a manner not specified by the manufacturer, the protection provided by the instrument may be impaired.
- Use equipment that is reinforced-insulated or double-insulated from the primary power supply for external circuits connected to this instrument.
- When using this product as a UL certified product, use a power supply conforming to Class 2 or LIM for the external circuit connected to the product.

1. Specifications

Ilowable voltage fluctuation 20 to 28 V DC Power consumption 3 W or less Ambient humidity 35 to 85 %RH (no condensation) Vittude 2,000 m or less Wright Approx. 140 g histallation environment Pollution degree 2 (EN61010-1) Aemory protection Non-volatile memory (Number of writes: 1 million times) Event input Input type: Voltage contact input sink type Circuit: NPN open collector Max. load voltage: 30 V DC Max. load voltage: 30 V DC Max. load capacity: 50 mA tost-to-module Start-stop synchronization communication EIA RS-422A, EIA RS-485 Communication method Start-stop synchronization Synchronization method Start-stop synchronization Sup bit: 1 or 2 Select the following with the DIP switch Data bit/Parity/Stop bit Select the following with the DIP switch Data bit/Parity/Stop bit Set the delay time to return the response from this instrument after receiving the command from the host. 0 to 1000 ms Number of connections This instrument: Max 16 modules For C SERIES COMPATIBLE, max 5 modules For C SERIES COMPATIBLE, max 5 modules SIF function Internal Bus

2. Overview

This instrument is a communication extension module that can configure a multi-point control system via a host computer or PLC.

A maximum of 16 control modules QTC1-20 (no power supply / communication option) (hereinafter referred to as QTC1-20) (hereinafter referred to as QTC1-20) or QTC1-40 (no power supply / communication option) (hereinafter referred to as QTC1-40) can be connected via BUS, and a maximum of 64 points can be controlled.

One block connected to BUS is called "1 unit".

In addition, a maximum of 16 units can be connected and a maximum of 1024 points can be controlled

3. Model

QMC1	-C		-	
Communication	C4			RS-422A
type	C5			RS-485 (*1)
		0		No option
Option Event input/output		1		Event input (4 points) (*2)
		2		Event output (4 points) (*2)
		3		Event input (2 points),
				Event output (2 points) (*2)
			0	Console selection
Communication p	rotocol		0	(MODBUS RTU/SIF function) (*1)
			1	C series compatible

- (*1) When using the SIF function to connect to a PLC manufactured by OMRON Corporation or KEYENCE CORPORATION, cannot be connected with RS-485 communication method. Only RS-422A communication type can be connected.
- (*2): The plug side connector of the event input / output connector is sold separately

4. Name and Functions

Operation indicator

ſ	8		Communication specification selection dip
			switch

5. Communication Parameter Setting

5.1 Selection of Communication Specifications

Use the communication specification selection dip switch on the left side of this instrument to select communication specifications.

Select the communication speed, data bit, parity and stop bit. All are off when shipped from the factory.

Communication speed: 9600 bps

· Data bit:

Switch and connector

- 8 bits
- Parity Enable/Disable: Enable
- · Parity Even / Odd:

Even 1 bit

Stop bit:

(1) Communication speed

	on specification dip switch	Communication speed
1	2	
OFF	OFF	9600 bps
ON	OFF	19200 bps
OFF	ON	38400 bps
ON	ON	57600 bps

(2) Data bit

Data bit	
Communication specification	
selection dip switch	Data bit
3	
OFF	8 bits
ON	7 bits

(3) Parity Enable/Disable

Communication specification	
selection dip switch	Parity Enable/Disable
4	
OFF	Enable
ON	Disable
	selection dip switch 4 OFF

(4) Parity Even / Odd

Communication specification	
selection dip switch	Parity Even / Odd
5	
OFF	Even
ON	Odd

(5) Stop bit

1		
	Communication specification	
	selection dip switch	Stop bit
	6	
	OFF	1 bit
	ON	2 bits

Dip switches No.7 and No.8 does not use. Leave it OFF.

5.2 Selection of Module Address

Caution ∕!∖

 The QMC1-C module address selection is required to communicate with the host computer or PLC The QTC1-20 or QTC1-40 module address selection is required to communicate with the QMC1-C The module address of QMC1-C differs depending on the model name

The module address is selected with the rotary switch.

Use a small flat blade screwdriver to select the module address The module address of QMC1-C differs depending on the model name

For QMC1-____0 [Console selection (MODBUS RTU/SIF)]

The value obtained by adding 1 to the value of the selected rotary switch becomes the module address

	ouulo	addid					
Module address:	0 to	F (1 t	o 16)				
Value of rotary switch	0	1		9	Α	В	
Module address	1	2		10	11	12	

For QMC1-____1 (C series compatible)

Module address: 0 to E (0 to 15)	The value of the selec	cted rotary switch becomes the module address.
	Module address:	0 to F (0 to 15)

F

16

Value of rotary switch 0	1	9	A	В	F
Module address 0	1	9	10	11	15

6. Mounting

Caution

- Do not connect QTC1-2P or QTC1-4P in the same unit.
- For the QMC1-□□-1 (C series compatible), the maximum connection "modules / channels" is "5 modules / 20 channels".
- When installing, make sure that the orientation (upper and lower) of this instrument is correct.
- When mounting or removing this instrument on the DIN rail, it must be tilted slightly.
- Secure a space of 50 mm or more in the vertical direction of the instrument, considering the wiring space of the power supply/communication line and heat dissipation

Spacing when QMC1-C and QTC1-40 are connected

- Mount the DIN rail horizontally This instrument fits the following DIN rails.
- Top hat rail TH35 JIS C 2812-1988
- If this instrument is mounted in a position susceptible to vibration or shock, mount commercially available end plate at both ends of the instrument.

6.1 Mounting

- Mounting to the DIN rail
- ① Lower the lock lever of this instrument. (The lock lever of this instrument has a spring structure, but if lower it in the direction of the arrow until it stops, it will be locked in that position.)
- Hook the part 2 of this instrument onto the top of the DIN rail. 3 Insert the lower part of this instrument with the part 2 as a
 - fulcrum.

(4)

(1)

3

Ring-type

① Lower the lock lever of the QTC1-40, and mounting the QTC1-40 to the DIN rail

K (2)

2 Slide the QTC1-40 to the left and connect the connectors to each other

6.2 External Dimensions

7.2 Pin and Terminal Arrangement

7.2.2 Power supply terminal and FG terminal arrangement The power and FG terminals are located on the base of this instrument.

Wiring by the following procedure.

- (1) Case removal
- ① Push the release lever on the top of this instrument to unlock it.
- 2 Remove the case.

(2) Wiring

✓ Caution

Do not use the wrong polarity for the power supply voltage (24 V DC). Use copper wires AWG16 to 14 $(1.31 \text{ to } 2.08 \text{ mm}^2)$ for the FG terminal and Power supply termina

OO

24 V DC

Ă

OFG

(3) Case mounting

- ① Hook the case on the lower part ① of this instrument
- ② Mount the case so that the lower part ① of this instrument is the fulcrum and covers the release lever. There is a clicking sound.
