Let us explain how to distinguish installation of normal USB driver from driver for ARM.
The setting screen will be shown.

(1) Left-click the [Start] in the lower left hand side of the screen. → Left-click the [Setting].
    The setting screen will be shown. [1]

[1]

(2) In the Settings screen, left-click on System.
   The system screen will be shown. [2]

[2]

(3) Left-click the [More information] in the Setting screen.

The More information screen will be shown. [3]

If [ARM base processor] is stated in System type, it needs to install a USB driver for ARM.

For any other cases, you can use a normal USB driver.
